Tennessee UROLOGY[®]

As women age, their bodies naturally change. And, just like every other part of the body, the vagina also changes, but additional decline in vaginal health and function may be caused by two major events in a woman's life:

- Pregnancy and vaginal childbirth
- Menopause and loss of estrogen

Now there's **MonaLisa Touch® minimally invasive laser treatment for vaginal rejuvenation**, a painless and minimally invasive laser treatment for vaginal rejuvenation. By acting on tissue of the vaginal mucosa (vaginal tissue), the laser gently stimulates the production of collagen, improving functionality and elasticity of the treated area and restoring balance to the mucous membrane.

MonaLisa Touch offers a personalized treatment for vaginal health issues including:

- Vaginal atrophy (dryness, itching, burning)
- Vaginal laxity
- Pain with sexual intercourse
- Diminished sexual sensation

MonaLisa Touch is one of the most effective, painless, and minimally invasive ways to restore vaginal health, and, most importantly, a woman's sensuality, confidence, and sexual well-being.

About MonaLisa Touch Laser Therapy

MonaLisa Touch delivers gentle laser energy to the vaginal wall tissue that stimulates a healing response by generating new collagen, elastin, and vascularization. The laser treatment is a simple procedure that takes less than five minutes in the provider's office. A typical course of treatment is three procedures over 18 weeks.

How MonaLisa Touch Laser Vaginal Therapy Works

MonaLisa Touch is a functional vaginal rejuvenation treatment based on a special fractional CO2 laser, specifically created for the vaginal mucosa.

During the quick laser procedure, your provider will gently insert the laser tip into the vagina and deliver painless energy "pulses." The CO2 laser safely delivers controlled energy to the vaginal mucosa, revitalizing the tissue and increasing collagen production for more nourished, toned, elastic, and healthier vaginal tissue. Vaginal pH is also restored, which helps maintain the natural protective barrier of the tissue.

The Results Speak for Themselves

After just one simple treatment, many patients report improvement in vaginal health and relief from the symptoms of vaginal atrophy and dryness. Virtually all women experience relief by the second treatment.

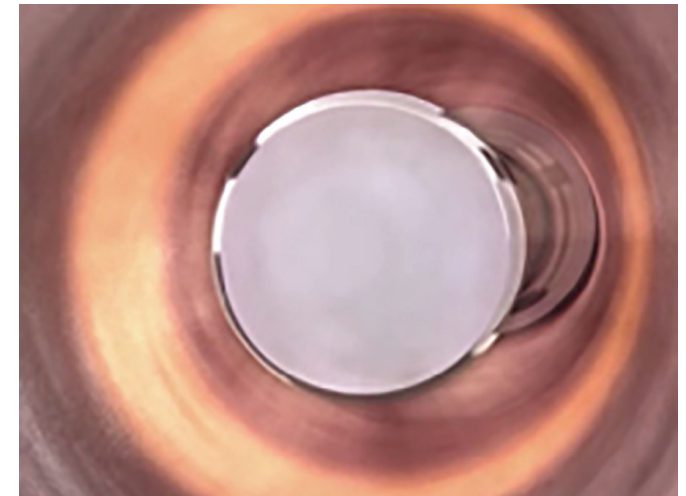

How Long Does Treatment Last?

MonaLisa Touch provides long-lasting results. A once-a-year single treatment is recommended to maintain symptom relief. This can be done quickly and conveniently during your annual checkup.

Is MonaLisa Touch Right for You?

As many as 50 percent of postmenopausal women suffer from changes in their vaginal health as estrogen levels decline. Symptoms such as vaginal dryness, itching, burning or painful intercourse are often experienced as women age.

Messy estrogen creams or hormone replacement therapy isn't for everyone. MonaLisa Touch is appropriate for any woman suffering from vaginal health issues caused by a decline in estrogen, as well as those who experience symptoms as a result of childbirth, a hysterectomy, or even breast cancer treatments.
